ORGANIC-Innovations

Finally! After more than two years of a trade fair stop due to the pandemic, we were all the more pleased to be able to welcome our guests in person again at this year's Techtexsil in Frankfurt. Our sustainable organic innovations VOWA_{led} Puria and the coffee-based automotive imitation leather "coffee inside" were of particular interest and attracted a never-ending stream of visitors to our stand. With a share of more than 50 % of renewable raw materials, both innovations score in terms of resource conservation, while maintaining the same properties. VOWA_{led} Puria with its classy and unobtrusive linen look is particularly suitable for the classic upholstery sector. The innovation project "coffee inside" in cooperation with the Volkswagen Group and the Technical University of Chemnitz, meets the special requirements for cover materials in automotive interiors. Both novelties are 100% vegan and the raw materials used are not part of the food chain. For more information, please contact our sales team, we are looking forward to your inquiry!

Naturally inspired...

PERI - 16 brand new colours!

The vivid and expressive colours of nature have inspired mankind since time immemorial. For the extension of our stock collection VOWA_{led} Peri, we too have been inspired by the fascinating interplay of natural colours. The result was 16 new and modern colours that usefully complement the collection. Peri is a universal synthetic leather for upholstery, which is particularly suitable for the medical couch area due to its biocompatibility. Moreover, Peri is phthalate-free, vegan and consists of 10% renewable raw materials! Find out more...

News about the gas supply...

VOWALON - informs

Rising prices on the energy market and the threat of a gas shortage continue to keep us very busy. In view of the existing uncertainties in gas supply, we are also preparing for extreme cases by means of an emergency plan. For the production of artificial leather and coatings, natural gas is absolutely necessary as a primary energy source in addition to electricity. Short-term substitution of natural gas has been extensively evaluated, but is not possible. In the current second escalation stage of the Gas Emergency Plan, we assume that gas supplies and current price conditions are still secured for the time being. Should this situation change, we will inform you immediately.

Please keep in mind our summer vacation from August 08, 2022 to August 19, 2022!
