Beschichtung GmbH Treuen

AWARD-WINNING COMPANY!

In May, our company was honoured with two prestigious awards, which highlight our innovative strength and our strong ties to the Vogtland region.

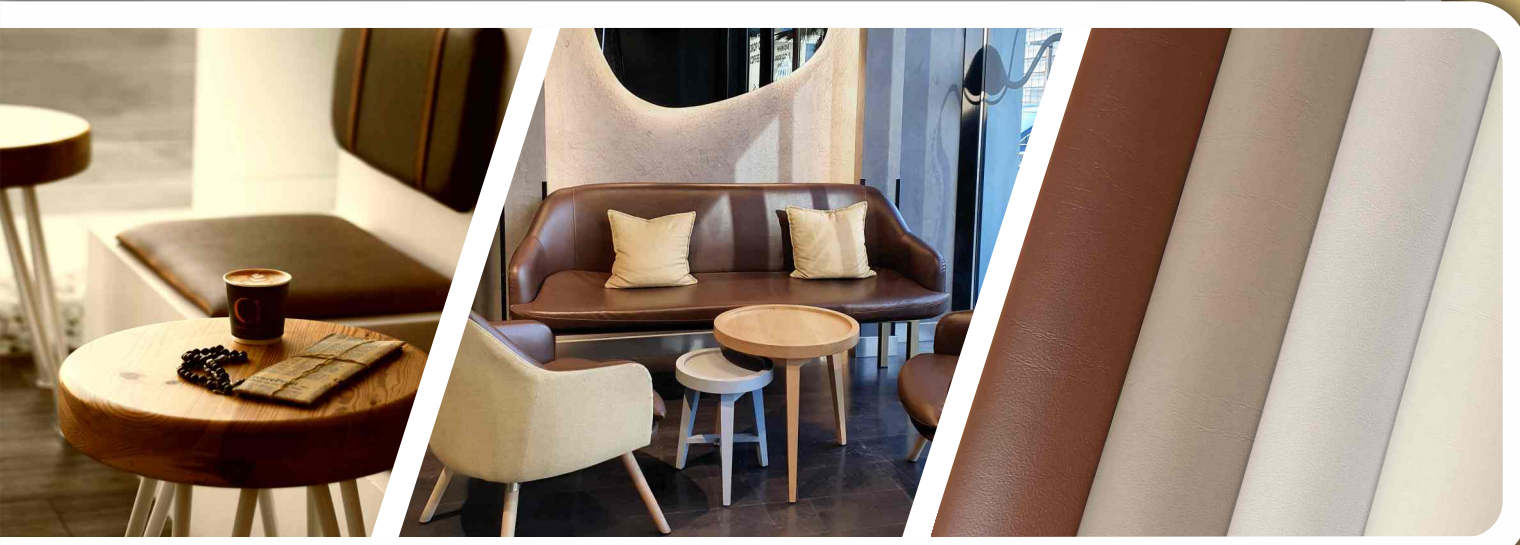

On 5 May, the East German Economic Forum awarded us the "VORSPRUNG" Business Award. Shortly afterwards, on 8 May, we won the "Saxony Entrepreneur of the Year 2026" award and were able to take home the golden winner's statue, "The Dreamer", by the artist Małgorzata Chodakowska.

"We are grateful, proud and overwhelmed to have received the award as Saxony's Entrepreneur of the Year 2026. "The Dreamer" inspires us to look to the future with courage, despite all the challenges and crises, and to continue investing in the Vogtland region!" said the management.

CHICAGO

Our latest product for the contract sector

With our new, antimony-free Chicago contract collection, we are now able to offer you an extensive range of 25 classic and modern colours with an aniline leather print. Thanks to its fine, elegant leather grain, this vegan collection blends stylishly into any setting, lending it a unique character. Thanks to its higher material strength and antibacterial surface, Chicago is particularly well suited to the catering and medical sectors. Find out [more](#).

BIOCOMP. vs. ANTIBAC

When do you need which type of protection?

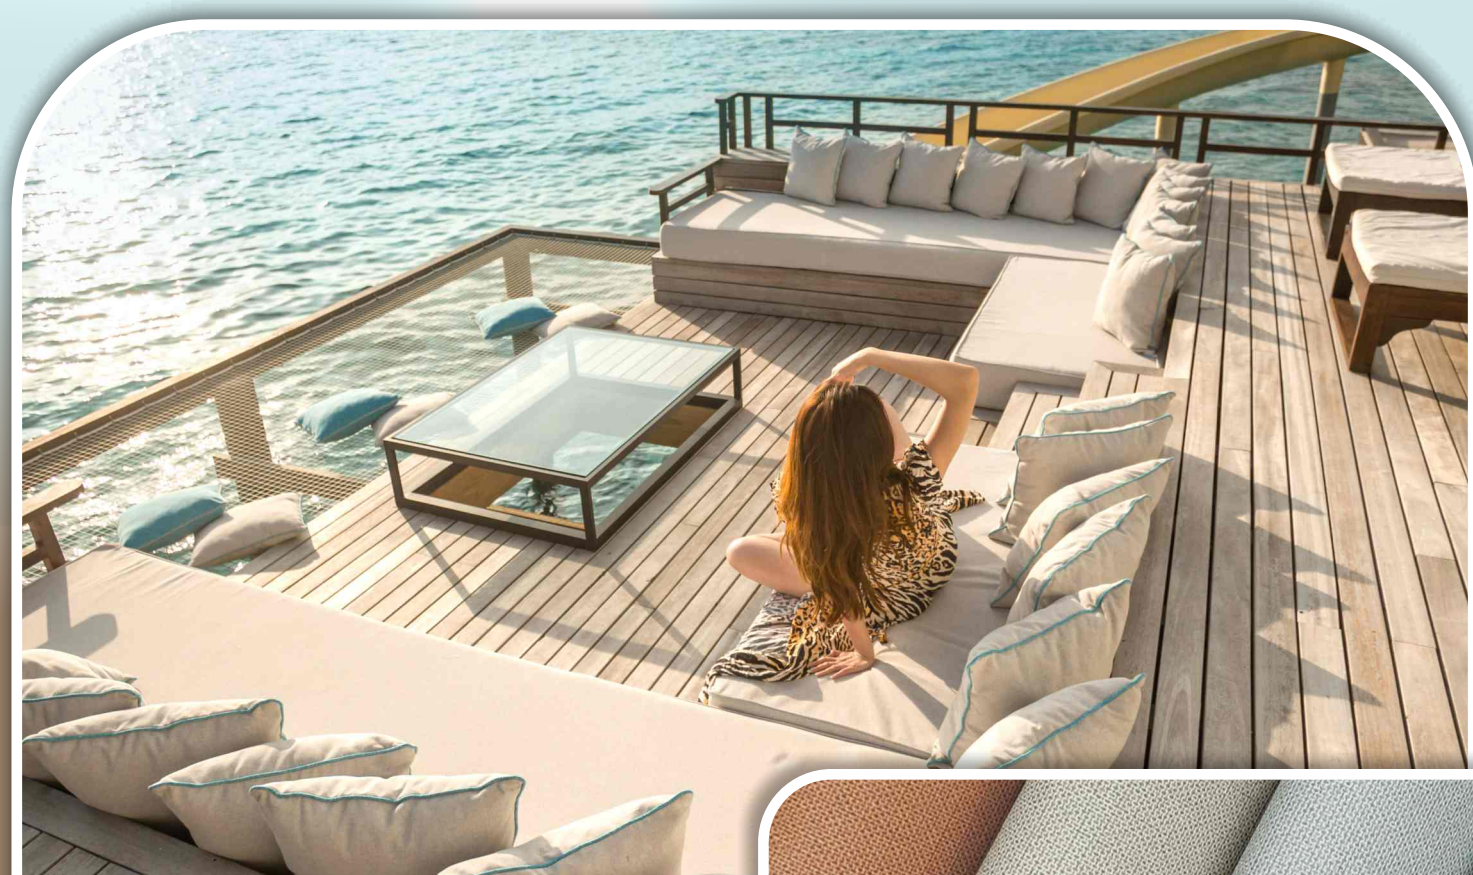

The two standards, ISO 10993 on biocompatibility and ISO 22196 on antibacterial efficacy, address two different issues: On the one hand, material compatibility; on the other, the reduction of bacteria on the surface. Biocompatibility assesses whether detachable components of the material can cause biological effects. Appropriate cell or tissue models are used to assess potential cytotoxicity (ISO 10993-5), sensitisation potential (ISO 10993-10) or irritation (ISO 10993-23). The test for antibacterial efficacy in accordance with ISO 22196, on the other hand, determines whether and to what extent the number of viable bacteria (usually E. coli and Staphylococcus aureus) on the surface of a material is reduced within a defined period of time.

Which standard is appropriate depends on the range of applications and the resulting requirements. Biocompatibility in accordance with ISO 10993 is particularly relevant in the medical and healthcare sectors, as well as in any context where a material may come into regular or prolonged contact with the body (e.g. therapy, dialysis, infusion, rest and treatment beds). Antibacterial efficacy in accordance with ISO 22196 may also be required in medical settings, but is frequently sought after for applications with a heightened focus on hygiene in commercial, industrial and private settings.

If you have any questions regarding the appropriate safety standards, our VOWAteam will be glad to assist you.

PRESTIGE

Enjoy the maritime lifestyle

Good news for our maritime upholstery imitation leather, VOWAled Prestige: Due to high demand, the stock collection is now available in 7 additional designs! This means you can choose from a harmoniously coordinated range of 16 modern colours for your next project. VOWAled Prestige is particularly notable for its elegant textile look appearance and, thanks to its flame-retardant properties in accordance with IMO FTPC Annex 1, Part 8, is particularly suitable for maritime applications. Find out [more here](#).

Please note our summer holidays from August 3, to August 14, 2026!
